Professional Summary

DevOps/Platform Engineer working across production Kubernetes, GitLab CI/CD, GitOps delivery and on-premises VMware vSphere. **CNCF Golden KubeStronaut, AWS Certified Solutions Architect - Professional, and HashiCorp Certified Terraform Authoring and Operations Professional.** Experience spans CI/CD pipeline reliability and security, **Terraform/Terragrunt** infrastructure as code on AWS, Prometheus, Grafana, ELK and Loki monitoring. Works with development teams in **Agile/Scrum** delivery.

Technical Skills

CI/CD & GitOps: GitLab CI/CD, Jenkins, GitHub Actions, ArgoCD, Flux, Helm, Kustomize, GitOps
Containers & Orchestration: Kubernetes (K8s), RKE2, Talos, Docker, Harbor, Longhorn, Istio, Cilium, Gateway API, Backstage, Crossplane
Cloud, Virtualization & IaC: AWS, GCP, Azure, VMware vSphere, VMware Cloud Director (VCD), Terraform, Terragrunt, OpenTofu, Ansible
Monitoring & Logging: Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), EFK (Fluentd), Loki, Tempo, Mimir, Pyroscope, OpenTelemetry
Networking & Security: TCP/IP, DNS, NAT, firewall configuration, load balancing, TLS and cert-manager, Kubernetes NetworkPolicy, HashiCorp Vault, HashiCorp Consul, SOPS, Kyverno, OPA, Trivy, Falco, SonarQube
Languages & Automation: Python, Bash, Go, PowerShell, JavaScript, Airflow, Airbyte, Trino
Ways of Working: Git, Agile, Scrum, Jira, Confluence

Experience

DevOps Engineer, AzInTelecom LLC Jul 2025 - Present

- Delivered platform changes through **GitLab CI/CD**, standardizing secret handling with **SOPS and HashiCorp Vault Transit Engine** so distributed teams share credentials through Git without plaintext.
- Built a self-service Internal Developer Platform with **Backstage and Crossplane**, cutting infrastructure provisioning time by **80%** and replacing ticket-based requests with self-service templates.
- Worked with development teams in **Agile/Scrum** sprints using **Jira and Confluence**, running platform onboarding and turning recurring infrastructure requests into reusable templates.
- Migrated **50+ microservices** from Ingress NGINX to **Gateway API/kGateway** with zero downtime, consolidating routing under a single declarative control plane.
- Automated disaster recovery migration across Availability Zones, achieving a **recovery time objective (RTO) under 10 minutes** with zero downtime for critical production services.
- Reduced AWS spend by **20%** with **OpenCost**, budget controls and FinOps reporting written for non-technical budget owners, and right-sized workloads using Robusta and KRR to cut requested CPU by **69%** and memory by **18%**.
- Designed a declarative data platform on **Airflow, Airbyte, Trino and Terragrunt**, delivered through GitLab CI/CD, accelerating pipeline deployments by **60%**.
- Ran **root cause analysis** on a control-plane outage in which the kernel OOM-killed kube-apiserver on three nodes at once, tracing it through kernel logs, OOM records and iostat to disk I/O saturation from stateful workloads co-located on the control plane (Longhorn, Vault) degrading **etcd**.

DevOps Engineer (Contract), TABIA Group

Apr 2025 - Aug 2025

- Operated production Kubernetes with **Prometheus and Grafana** through Kube-Prometheus-Stack, alongside Cert-Manager and NGINX Fabric API Gateway, handling first-line diagnostics on service incidents.
- Deployed a high-availability **HashiCorp Consul** cluster for dynamic service discovery across **30+ microservices**.
- Built CI/CD workflows around golden container images, reducing pipeline execution time by **50%**.

DevOps Engineer (Part-time), Cerberus LLC

Jan 2025 - Jul 2025

- Automated **VMware vSphere** environment provisioning, cutting developer setup time from 5 hours to 3 hours.
- Established GitOps deployments with **Helm and Argo CD**, keeping staging and production releases consistent.
- Integrated **SonarQube** into CI/CD pipelines, reducing critical code quality and security issues by **30%**.

Backend Developer (Part-time), ROCB Europe

Jun 2024 - Aug 2024

- Built **10+ REST APIs** in a **JavaScript** application stack, giving direct context for supporting application teams on builds and deployments.
- Developed an AI-powered chatbot with LangChain and Google Cloud APIs, automating **25%** of inbound support queries.

Cyber Security Engineer (Intern), Cybernetics LLC

Jun 2024 - Jul 2024

- Identified and reported **15+ critical vulnerabilities** through network and host penetration testing on Windows and Linux, covering firewall rules, exposed services and **TCP/IP** misconfiguration.
- Ran continuous vulnerability assessments with Nessus and OpenVAS, reducing high-risk findings by **50%**.

Projects

Securing AI-Augmented DevOps - IEEE CAI submission

- Co-authored an IEEE CAI submission on securing LLM-generated infrastructure code, building a real-time validation layer with **OPA and Kyverno** policy-as-code guardrails to catch misconfigurations before they reach a cluster.

Enterprise Blockchain Orchestration and Consensus Mechanisms

- Automated **Hyperledger Fabric** deployments on Kubernetes with OpenTofu and the Hyperledger Bevel Operator, and simulated the 3f+1 consensus rule comparing **SmartBFT** against Raft CFT under different failure models.

Certifications

CNCF / Linux Foundation: Golden Kubestronaut; CKA; CKAD; CKS; KCNA; KCSA; LFCS

AWS: Certified Solutions Architect - Professional; Certified Solutions Architect - Associate, Certified AI Practitioner; Certified Cloud Practitioner

HashiCorp: Certified Terraform Authoring and Operations Advanced (formerly Professional)

Red Hat: Certified System Administrator (RHCSA)

Education

BS in Information Security, Baku Higher Oil School | Sep 2022 - Jun 2027 (Expected)

Final year; Presidential Scholarship Recipient; GPA 3.8/4.0

DevOps Engineer Program, IDTech Academy | Oct 2024 - Feb 2025

High Honor Certificate

Backend-Focused Full Stack Web Development, Code Academy | Dec 2023 - Jul 2024

Honors Diploma
